DETAILED ACTION

Applicant's arguments, see Arguments and Remarks, filed 11/9/2007, with respect to claims 11-18 have been fully considered and are persuasive. The rejection based on Savineau (FR 2262167) of 8/10/2007 has been withdrawn.

However, new ground of rejection has been made as follows:

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 11-18 are rejected under 35 U.S.C. 103(a) as being unpatentable over Zambelli et al. (US 6647678) in view of Nacey et al. (US 6065257). Regarding claims 11 and 14, Zambelli illustrates in Figures 1-3 a beam attachment system comprising:

- Two posts (2);
- A beam (1); and
- Beam ties (31).

The examiner notes that the posts would be inherently stressed by the beam to push them apart and the beam ties would inherently be provided to keep them from falling over by applying an equal and opposite force to pull them together.

However, Zambelli does not distinctly disclose the beam and beam ties mounted in a sliding relationship. Nacey illustrates in Figures 1 and 2 a beam (3) in sliding relationship to the beam ties (10) via a slide plate (30). Both Zambelli and Nacey disclose inventions related to beam attachment systems involving posts, beams, and beam ties. It would have been obvious to one having ordinary skill in the art at the time of invention to modify the beam attachment system of Zambelli with the sliding plate and shoe (50) in order to easily adjust the tension of the beam tie for better beam stability and strength.

Regarding claim 12, Nacey illustrates in Figures 4 and 5 sleeves (50) mounted on the beam tie (10) used to delimit the movement of the sliding portion.

Regarding claim 13, Zambelli illustrates in Figures 3 and 4 a tubular passage (34) for the beam tie (31) which has a top, bottom, and sides (two lateral parts).

Regarding claim 15, Zambelli illustrates in Figure 2 the beam comprising several longitudinal segments (1).

Art Unit: 3635

Regarding claim 16, Zambelli illustrates in Figures 3 and 4 the posts (2) connected to the beam (1) via a connecting rod (12).

Regarding claim 17, Zambelli illustrates in Figure 1 the posts (2) being edge posts.

Regarding claim 18, Zambelli discloses in column 4, lines 19-23 a portion on the beam being welded steel.
